

NATIONAL SENIOR CERTIFICATE EXAMINATION  
EXEMPLAR 2014

## MATHEMATICAL LITERACY: PAPER II

### MARKING GUIDELINES

Time: 3 hours

150 marks

---

#### Key

**AT** = Application Topic

*F* – Finance

*M* – Measurement

*R* – Maps, Plans and Other Representations

*D* – Data-Handling

*P* – Probability

**TL** = Thinking Level

**MA** = Mark Allocation

✓<sup>a</sup> = Accuracy Mark

✓<sup>ca</sup> = Continued Accuracy Mark

✓<sup>m</sup> = Method Mark

		MA	AT	TL
	<b>QUESTION 1</b>			
1.1.1	<p>KNP (SANParks) 146  NW 57  LIM 52  KZN 38  MP 17  GP 15  EC 4  FS 3  NC 1  MNP (SANParks) 0  WC 0</p> <p>✓<sup>a</sup> Data labelled.  ✓<sup>a</sup>✓<sup>ca</sup> Data sorted from highest to lowest.</p>	3	D	3
1.1.2	<p>It is easier to see which provinces are the most affected by rhino poaching, in order to know where to prioritise.</p> <p>✓<sup>m</sup>✓<sup>m</sup> Logical explanation given.</p>	2	D	2
1.2.1 (a)	<p>See Answer Booklet</p> <p>✓<sup>a</sup> Double-Bar Graph  ✓<sup>a</sup> Gap between provinces  ✓<sup>a</sup> per province = 3 marks  ✓<sup>a</sup> Key (Poach and arrest columns labelled)  ✓<sup>a</sup> Axes labelled and appropriate scale  ✓<sup>a</sup> Heading</p>	8	D	3
1.2.1 (b)	<p>KZN ✓<sup>a</sup> – it has the greatest difference between poaching and arrests. ✓<sup>m</sup></p>	2	D	4
1.2.2	<p>Learner A – Has not labelled axes ✓<sup>a</sup>✓<sup>a</sup>  Learner B – Incorrect scale on vertical axis (starts at 5) ✓<sup>a</sup>✓<sup>a</sup></p>	4	D	4
1.3	<p>2010 – 6    2011 – 16    2012 – 26</p> <p><b>2010 – 2011:</b>  <math>\frac{16 - 6}{6} \times 100</math> ✓<sup>a</sup> ✓<sup>m</sup>  = 166,67% ✓<sup>ca</sup></p> <p><b>2011 – 2012:</b>  <math>\frac{26 - 16}{16} \times 100</math> ✓<sup>a</sup> ✓<sup>m</sup>  = 62,5% ✓<sup>ca</sup>  ∴ 2010 – 2011 was the best. ✓<sup>ca</sup></p>	7	D	3

		MA	AT	TL
1.4.1	<p><b>Total:</b></p> $1\ 646 + 251 + 173 + 465 + 201 + 517 + 105 + 213 + 39 \checkmark^m = 4\ 179 \checkmark^a$ $\frac{1\ 646 \checkmark^a}{4\ 179 \checkmark^a} \times 500 \checkmark^m$ $= 196,94$ $= 197 \text{ employees } \checkmark^m \quad (\text{Appropriate Rounding})$	5	D	3
1.4.2	<p>(a) <math>\frac{1\ 646}{197} \checkmark^m</math> Using answer from Question 1.4.1 as denominator</p> $= 8,36$ $= 8 \text{ rhino } \checkmark^{ca} \text{ or } 9 \text{ rhino } \{ \text{Accept both} \}$ <p>(b) <math>125\ 754 \times 247,105 \checkmark^m</math></p> $= 31\ 74\ 442,17 \text{ acres } \checkmark^{ca}$ $\frac{31\ 074\ 442,17 \checkmark^m}{197}$ $= 157\ 738 \text{ acres } \checkmark^{ca}$	6	D	3

[37]

		MA	AT	TL
	<b>QUESTION 2</b>			
2.1.1	$A = P(1 + i)^n$ $A = 7\,000 \checkmark^a \left(1 + \frac{0,883}{100}\right)^2 \checkmark^m$ $A = 7\,124,165 \dots \text{people}$ $A = 7\,124 \checkmark^{ca}$ $\therefore 7\,124 - 7\,000 \checkmark^m$ $= 124 \text{ people born } \checkmark^{ca}$	5	F	2
2.1.2	$A = P(1 - i)^n$ $A = 7\,000 \checkmark^a \left(1 - \frac{1,38}{100}\right)^2 \checkmark^m$ $A = 6808,13 \dots \text{people}$ $A = 6\,808 \checkmark^{ca}$ $\therefore \text{Population} = 6\,808 + 124 \checkmark^m$ $= 6\,932 \checkmark^{ca}$	5	F	2
2.1.3	The mortality rate is greater than the birth rate. $\checkmark^m$ Hence, Barrydale would have a very small population. $\checkmark^m$	2	F	4
2.2.1	See Answer Booklet  <b>Farm Design</b> <ul style="list-style-type: none"> <li>• Total Area Length = 30 blocks <math>\checkmark^a</math> Breadth = 20 blocks <math>\checkmark^a</math> (or any measurements which give <math>150 \text{ km}^2</math>)</li> <li>• Holiday resort Length = 5 blocks <math>\checkmark^a</math> Breadth = 1 block <math>\checkmark^a</math></li> <li>• Dam Diameter = 1 block <math>\times</math> 2 dams <math>\checkmark^a</math></li> <li>• Landing strip Length = 3 blocks <math>\checkmark^a</math> Breadth = <math>\frac{1}{2}</math> block <math>\checkmark^a</math></li> </ul>	7	R	2

		MA	AT	TL
2.2.2	<ul style="list-style-type: none"> <li>• Total Area <math>A = 150 \text{ km}^2</math></li> <li>• Holiday Resort <math>A = 2,5 \times 0,5</math> <math>A = 1,25 \text{ km}^2 \checkmark^a</math></li> <li>• Dam <math>A = (3,14)(0,25 \checkmark^a)^2 \times 2 \checkmark^m</math> <math>A = 0,3925 \text{ km}^2 \checkmark^{ca}</math></li> <li>• Landing strip <math>A = 1,5 \times \frac{1}{4}</math> <math>A = 0,375 \text{ km}^2 \checkmark^a</math></li> </ul> <p>Area left for cattle = <math>150 - 1,25 - 0,3925 - 0,375 \checkmark^m</math> = <math>147,98255555 \text{ km}^2 \checkmark^{ca}</math></p> <p>∴ Number of cattle farm can accommodate: = <math>147,9825 \times 12,5 \checkmark^a</math> = <math>1\ 849,78 \checkmark^{ca}</math> = <math>1\ 849</math> cattle <math>\checkmark^{ca}</math></p>	10	M	4
2.3	<p>See Answer Booklet</p> <p><math>\checkmark^a \checkmark^a \checkmark^a \checkmark^a</math> Income and Expenses grouped correctly {Subtract 1 mark per incorrectly grouped account}</p> <p><b>Calculation</b> Income: = <math>52\ 850 + 16\ 400 + 7\ 500 + 2\ 000 \checkmark^m</math> = R78 750 Expenses: R2 150 + R2 500 + R3 800 + R18 000 + R9 650 + R48 000 + R590 <math>\checkmark^m</math> = R84 690 ∴ <math>R78\ 750 - 84\ 690 \checkmark^a</math> = <math>-R5\ 940</math> loss <math>\checkmark^{ca}</math> Conclusion: Loss <math>\checkmark^{ca}</math></p>	9	F	4

		MA	AT	TL
2.4.1	<p>Learners may use a tree diagram. 1 mark per 2 combinations.</p>	6	P	3
2.4.2	$\frac{6\sqrt{a}}{12\sqrt{a}} = \frac{1}{2}\sqrt{ca}$	3	P	2

[47]

		MA	AT	TL
	<b>QUESTION 3</b>			
3.1.1	<p>Number of rows = <math>3 \div 0,5</math> (One wire every 50 cm)  <math>= 6 + 1</math> (ground)  <math>= 7</math> rows ✓<sup>a</sup></p> <p>Perimeter = <math>(20 + 0,5 + 0,5 \checkmark^a) \times 3 \checkmark^m</math>  <math>= 63 \text{ m} \checkmark^{ca}</math></p> <p>Total = <math>63 \times 7 \checkmark^a</math>  <math>= 441 \text{ m} \checkmark^{ca}</math></p> <p>No. of rolls = <math>441 \div 5 \checkmark^m</math>  <math>= 88,2</math>  <math>= 89</math> rolls ✓<sup>ca</sup></p> <p>Cost = <math>89 \times 55 \checkmark^m</math>  <math>= \text{R}4\,895 \checkmark^{ca}</math></p>	10	M	3
3.1.2	<p>∴ Total Surface Area = <math>\frac{1}{2} (b \times \perp) \times 4</math>  <math>= \frac{1}{2} (21 \times 15) \times 4 \checkmark^m</math> (correct subs.)  <math>= 630 \text{ m}^2 \checkmark^{ca}</math></p> <p>Cost = <math>630 \times 670 \checkmark^m</math>  <math>= \text{R}442\,100 \checkmark^{ca}</math></p>	4	F	3
3.1.3	<p>Learner must list 2 logical ways in which to reduce the cost of the boma.</p> <ul style="list-style-type: none"> <li>• Make the boma smaller ✓<sup>m</sup></li> <li>• Use less fairy lights (i.e. every 100cm) ✓<sup>m</sup></li> <li>• Use cheaper material other than thatch</li> <li>• Use cheaper fairy lights</li> <li>• Use local thatching instead of imported</li> <li>• Install the lights yourself</li> </ul>	2	F	4
3.2.1	<p>Horizontal Axis Units – Should be from 1 – 10 ✓<sup>a</sup>            Vertical Axis Label – Amount Raised (Rands) ✓<sup>a</sup>            Heading – Fund-raising</p>	2	F	2
3.2.2	<p>Method 1 ✓<sup>a</sup> – if no kilometres are run, then no money is raised.            (There is no initial donation.) ✓<sup>m</sup></p>	2	F	4
3.2.3	<p>Method 1: R20 per kilometre. ✓<sup>m</sup></p> <p>Method 2: R50 donation ✓<sup>m</sup> plus R10 per kilometre. ✓<sup>m</sup></p>	3	F	4

		MA	AT	TL
3.2.4	See Answer Booklet  $\checkmark^a$ Straight Line $\checkmark^a$ Starts at R50 $\checkmark^a$ Point of intersection at 5 km/R100 $\checkmark^a$ Ends at R150	4	F	3
3.2.5	If less than 5 km, then Method 1. $\checkmark^m$ If greater than 5 km, then Method 2. $\checkmark^m$ If 5 km, any of the two methods.	2	F	4
3.3	<b>Bottle</b> $V = \pi r^2 h$ $V = (3,14)(5)^2 (25) \checkmark^m$ $V = 2\,198 \text{ cm}^3 \checkmark^{ca}$  <b>Nozzle</b> $V = (3,14)(0,4)^2 (2) \checkmark^m$ $V = 1,0048 \text{ cm}^3 \checkmark^{ca}$  Total Volume = $2\,198 + 1,0048 \checkmark^m$ = $2\,199,0048 \text{ cm}^3 \checkmark^{ca}$  Number of litres required = $2\,199,0048 \div 1\,000 \checkmark^m \times 50 \checkmark^m$ = $109,95 \text{ litres} \checkmark^{ca}$ = 110 litres	9	M	4

[38]

		MA	AT	TL
	<b>QUESTION 4</b>			
4.1	Incorrect. $\checkmark^a$ North-East $\checkmark^a$	2	R	2
4.2.1	Joseph divided by 3,1 $\checkmark^m$ instead of multiplying by 3,1. $\checkmark^a$ Petrus converted incorrectly. $\checkmark^m$ 8 km = 800 000 cm $\checkmark^a$	4	R	4
4.2.2	Scale: 1 cm : 8 km Real-life: $3,1 \times 8 \checkmark^a \checkmark^a$ = 24,8 km $\checkmark^{ca}$  <b>OR</b> Scale: 1 cm : 8 km 1 : 800 000 $\checkmark^a$ Therefore: 3,1 cm on map = 2 480 000cm in real-life $\checkmark^a$ Convert to km: $2\,480\,000 \div 100\,000$ = 24,8 km $\checkmark^{ca}$	3	R	2
4.3.1	$24,85 \times 1,609344 \checkmark^m$ = 39,999 ... = 40 km/h $\checkmark^{ca}$	2	R	2
4.3.2	$\frac{10,4}{40} \checkmark^a$ = 0,26 ... hours $\checkmark^{ca}$ = 15 minutes $\checkmark^{ca}$ 36 seconds $\checkmark^{ca}$	4	R	3
4.3.3	$10,4 \div 9,2 \checkmark^m$ = 1,13 litres $\therefore 1,13 \times 12,87 \checkmark^m$ = R14,55 $\checkmark^a$	3	F	3
4.4.1	Between miles 6 and 7 $\checkmark^a$	1	R	4
4.4.2	Yes. $\checkmark^a$ Starting elevation is $\pm 190$ ft and Finish elevation is $\pm 190$ ft. $\checkmark^m$	2	R	4
4.4.3	Highest elevation $\pm 390$ ft $\checkmark^a$ {Accept anything between 380 ft and 400 ft} Lowest elevation $\pm 175$ ft $\checkmark^a$ {Accept anything between 165 ft and 185 ft} Range = $390 - 175$ = 215 ft $\checkmark^{ca}$ $\therefore$ Bruce is correct. $\checkmark^m$	4	D	4
4.4.4	$21,1 \text{ km} \div 1,609344 \checkmark^a = 13,11 \text{ miles} \checkmark^{ca}$ Elevation map ends just after 13 miles, hence half-marathon. $\checkmark^m$	3	R	4
